Hi !

I would like to modify the length of the minor tick marks in my IDL plot. For Major tick marks there is the "ticklen" keyword. Is there a "minorTicklen" keyword? How could I obtain a minorTicklen=1.0 (i.e. minor tick mark for one side to the other on my plot, similar to ticklen=1.0) on my plot, especially in log scale.

Thanks for your consideration.

Noah
