
Subject: Code for selecting a study from a dicomdir

Dear IDL gang,

A while back I asked about selecting a study from a dicomdir file. Someone contacted me about that recently, so I've packaged it up and unleashed it on the world, I mean, released it under the Apache 2.0 license, which is what IU likes to use.

medimg_dicom_selector is part of the medimg library from the Department of Radiology at the Indiana University School of Medicine. A tar file is available at <http://mypage.iu.edu/~mmiller3/IDL/>.

Medimg is a larger library which is not quite safe for public consumption yet - I'll be releasing the whole thing sometime this spring I hope - at least more bits and pieces.

I hope that others find this useful. Please pass bug fixes and suggestions back to me!

Regards, Mike Miller
