Greetings all!

The last time I posted here I got awesome help and I have what I believe is a smaller problem this time.

I am trying to use the fit_ellipse program (http://www.dfanning.com/ip_tips/fit_ellipse.html) and having some difficulty in that my ROI is a contour defined by a 2-D array and not a 1-D array of pixels.

My 2-D array contains the x and y positions of all the points along that contour (or ROI) so I am trying to translate this fit_ellipse program to something I can use.

Would really appreciate the help!

Bruno
