Hi,

So i want to be able to label the x-axis with non-standard time array.  
The x-axis values would look something like "021 12:20:00" for  
example, where the first two numbers represent the number of days  
since the experiment began. I need to be able to dynamically change  
the plot so the x-axis labels will need to be updated on the fly. For  
normal time data i use the label\_date function however i can only  
display the day as day of the month.

Any ideas?

Many thanks,

Clive
