Subject: LOG AXIS, itools and tickmarks
Posted by tictac123 on Thu, 28 Feb 2008 08:24:52 GMT

hi every body,

i use the itools to plot my graphe, and i have a problem with the log scale.

If i plot some data between [1; 10000], this 5 decades, the thick marks are in float format like 1e000 to 1e005 and if i plot the same data between [1;100000], on 6 decades, the ticks mark becomes 10^0 to 10^6.
of course i prefer this format, this is more professionnal.

I try to force this format for the 5 decades plot. I selected in the proprety box the menu " use format thick" and i tried to used sometink like : (10!U, (I2), !N). but it didn't work.

Do you have a idea to force the 10^0 format for the plot with less of 5 decades?

thanks

F
