---

I am hoping to put some sample code on my web site soon to demonstrate how to program the iTools.

In preparation for that, I am putting some useful low-level routines and data files on my downloads page

<http://idl.tamu.edu/Downloads.html>

At the bottom of the page you will find "Land-ocean masks" and "Topography and bathymetry data". These zip files contain some publicly-available data sets and simple IDL functions to read the data files, along with example programs that demonstrate their use.

Cheers, Ken Bowman
