I still don't think you should be getting compilation errors though.

The error may be in the procedure immediately above your get_data procedure, like a missing endif/endfor or something. What line is 276 in your file? If it's the first line of get_data then I'm betting the problem is actually in the previous procedure. I can compile your code snippet without problems on my machine and can't see any reason why yours shouldn't do the same.

Anyway, good luck!

Chris
