Hi

i try to mosaic a lot of files programatically , they are georeferenced.

I dont create any header i just pick up map info an georeference information

from one manually maked file and evrything works but only if pixel_size values are 1. (or greather), can someone explain me why mosaic_doit

crash if pixel_size are lover than 1 ?

first file map_info1.PS[0]=map_info1.PS[1]=0.00430228 [degrees]

second file map_info2.PS[0]=map_info2.PS[1]=0.00459742

resulting files should have the same PS like first file

Wojtek
