Hi all,

I am developing a macro language text editor using IDL.

I have the following questions:

- 1)Is there any way to add colors to the texts displayed using 'widget_text' or 'CW_field' .? (using direct graphics)
- 2)Can I use IDL Object Graphics (eg,'IDLgrText') to change text color and display the colored text in the text space created by 'widget_text'.

Any help will be appreciated.

regards,

P.Rajiv
