Are these Level 2 images, or Level 3? Level 2 products are organized
around 5-minute granules of data, and are generally in HDF-EOS Swath
format. For best results, a Geolocation (MOD03 or MYD03) file should be
used for georeferencing such data.

Level 3 images are rebinned to a rectangular grid in som particular map
projection (often sinusoidal), and are stored in HDF-EOS Grid format.

The techniques that should be used are somewhat different in the two cases.

And, as David said, we need a whole lot more details about what it is
you are trying to do.
