Subject: Help with HDF\_VD\_WRITE - field names Posted by Thiago Biscaro on Fri, 04 Apr 2008 14:29:07 GMT View Forum Message <> Reply to Message

Hi everybody

I'm trying to write a Vdata to an HDF file, but for some reason, the only field description IDL accepts is 'PX', like the example in the IDL user's guide.

The command

HDF\_VD\_WRITE, Vdat, 'PX', intarr(5)

works fine, but

HDF\_VD\_WRITE, Vdat, 'RR', intarr(5)

returns

HDF\_VD\_WRITE: Unable to set the VDATA fieldnames to <STRING ('RR')>.

I need to set the field name to something that I can understand later, so PX is not an option... Any ideas on how to sole this? I know I can write as an SDS, but I need to do as Vdata for compatibility with some files we process here.

Thanks!
