
Subject: corrupted PROLOG.PS in old IDL

I am running some applications that I wrote a few years ago for the VAX in a version of IDL called IMSLIDL. Some of you may be aware of the history of this product which bundled IDL with a cut-down version of the IMSL Math and Stat libraries. I believe that the version of IDL that was bundled with the package was 2.4 or so. Unfortunately, the files in my IMSLIDL_DIR:[PS] directory have become corrupted and I no longer have access to a distribution disk. Specifically, the file that I am SURE I need is PROLOG.PS, but there may be others - I don't have a listing of the contents of the dir. Thus, at this point, I can no longer generate postscript output from the affected applications.

I would greatly appreciate someone with access to an old version of IDL or IMSLIDL furnishing me with the files from the aforementioned PS directory. The files may not have to come from a VAX but a VAX installation would probably be preferable. I have looked in the current version of IDL (I'm running v4.01 on a SUN) and cannot find any comparable files.

Thanks in advance.

Evan Morris
