Keywords: postscript, IMSLIDL, PROLOG.PS

I am running some applications -on a VAX- that I wrote in an old version of IDL
called IMSLIDL whose history some of you may know. The actual version of IDL
bundled with IMSL numerical routines was, I believe, v2.4. Unfortunately,
files in my IMSLISL_DIR:[PS] directory have become corrupted and I no longer have
access to a distribution disk. Thus, I am no longer able to generate postscript
output.I would greatly appreciate it if someone could furnish me with the files
that should be in the above directory. The file that I know I need is PROLOG.PS
It probably exists in other versions of IDL and may not even have to come from
a VAX - but a VAX would probably be best.

Comparable files seem NOT to exist in the current UNIX version (I'm running
v4.01 on a SUN), so I'm looking for help from someone who has been using IDL
for a few years and has old files hanging around.

Thanks in advance.

Evan Morris
