Hai Everyone,

I hope somebody will sort out my problem.

I have procured ASTER L1A data. As it is a raw data format, i have to register it both radiometrically and geometrically. I'm using ENVI4.4 version.

My questions :

1. Can we directly import the DNvalues of image in to radiance in ENVI.
2. Is destaggering is necessary for SWIR AND TIR data?

Pls come with some helpful answer..

Thnaks
