Subject: IDL and X and PS

I am looking for any information and/or procedures that make it
eash to stay with the same coordinates system when going from
set_plot,'x to/from set_plot,'ps' in IDL.

For example, it seems that tv and xyouts uses a different coordinate
system in PostScript then when in the X environment.

Is there a way to make a procedure work the same when in X or PS
without having to make a lot of changes?

Thanks
Robert
