Boy! this is turning out to be one long list. And going through it I realized I have faced most of them and learnt them the hard way.

Since I have been working with images in different formats, I would like to mention that the reading/ display order of various formats is easy to get confused with and when working with multiple formats at the same time, I have displayed my images upside down-many a times.

I hope David extends his list beyond 10-15 to include all the common errors.

Cheers,  
Gaurav
