Subject: Array plotting and segmentation
Posted by moxament on Mon, 14 Apr 2008 14:16:43 GMT

Dear All,

I have the following problem:

I have an array lets say A = [3,4,6,8,3,2,5,7,10,5,4]. As you can see,
in this array we have two peaks (8 and 10) and one gap (2). I want to
plot this array and draw a line on the gap element (which is in 2)
vertical on the x axes and parallel to the y axes. In other words, I
want to segment the the curve produced by plotting the array by
drawing a line on the gap element.

Any help will be appreciated.

Thank you very much in advance,

Dabboor
