Unfortunately ImageShack can't send rightih2.png. The server it is hosted on seems to be having problems. But...

> Could this be a quirk of the operating system or video hardware?

It most likely is. A simple test would be to explicitly set your window to use the software renderer. If it renders correctly to the local screen then you know it is an issue with the video adapter/drivers.

What OS/distro? Who makes the graphics adapter?
