Hi, guys,

I have a txt file with concentration data at each

Lat-Lon on 1 deg resolution for world map.

I have ArcGIS 9.2 and ENVI. can i use any one of this programs to create a Geo Lat/Lon world map at 1 deg X 1 deg resolution and then some how compare these to 2 file to calculate the total concentration of each region like asia or countries like china, usa etc..

or if i could assign all the Lat/Lon according to countries or regions.

could someone give me suggestions on how to proceed.
