Rick,

you may be onto something here...

Paolo what do you get from typing "limit" at a terminal prompt?

I ran "ulimit" which unsets the limit but forgot to look at the limit beforehand (oops)

```
[balarsen@comm725-0401-dhcp-226]~> limit
cputime    unlimited
filesize   unlimited
datasize   6144 kbytes
stacksize  8192 kbytes
coredumpsize 0 kbytes
memoryuse  unlimited
descriptors 256
memorylocked unlimited
maxproc    266
```

However I had the same IDL result, error on array d.

Yes I have 4GB of RAM in my macbook pro.

Cheers,

Brian
