> % Program caused arithmetic error: Floating underflow

I get this same message on startup also with seemingly no effect.

I am on IDL 6.4.1 on OSX 10.5.2.

Here is my startup info

```
[balarsen@larsenlaptop]~> idl
IDL Version 6.4.1, Mac OS X (darwin i386 m32). (c) 2007, ITT Visual
Information Solutions
Installation number:
Licensed for use by: Boston University
```

```
% Program caused arithmetic error: Floating underflow
% Compiled module: JOURNAL_UNIQUE.
% Compiled module: BIN_DATE.
```

The journal_unique and Bin_date are in my .idl_startup and make a journal at startup with the date and time, that then records every IDL session I do. Mostly just get deleted but sometimes handy.

Cheers,

Brian
