```
Like always, I read in my ascii (.txt) files as follows:
>
> input = file.txt'
> res = read ascii(input,
  DELIMITER=' ',DATA_START=1,MISSING_VALUE=-9999)
  This is working when checking with the print, res statement.
>
>
 Now, I always extract columns from this file, while using the
> following statement
 year = reform(res.field01(0,^*)) or year = reform(res.field(0,^*))
>
> As I am not completely sure how this FIELD statement is working, I was
 hoping on some help? Because in this case, I get the following ERROR
  message:
>
  % Tag name FIELD01 is undefined for structure < Anonymous>.
> And I have no idea why? Normally, if I have this message, I change
> from field 01 to field, and than it works. This time, it doesn't.
> Could anybody help me with this?
IDL> HELP, res, /STRUCTURE
Cheers,
David
