Hi,

I am trying to call a fortran 90 routine from an IDL program by first creating a .so file and then using CALL_EXTERNAL. The command I use is as follows:

```
CALL_EXTERNAL('try02.f90','t',a,b,c)
```

and I get the error:

```
% CALL_EXTERNAL: Error loading sharable executable.
```

```
Symbol: t, File = try02.so
```

```
./try02.so: undefined symbol: t
```

Any idea what I might have done wrong?
