Well, "vanish" is not what is meant by "hide", I don't
think. When the documentation says "show", they mean
bring the window to the front of the window stack. When
they say "hide", they mean move it down in the window
stack. It doesn't "vanish".

Maybe you want to make an icon of the window. That will
take it off the display and move it to the application bar
at the bottom (usually) of the display. Set the ICONIFY
keyword to WSHOW.

Cheers,

David
