
Subject: Project sav file in 7.0

It hasn't been possible for me to create a sav file from a project with several routines since version 7.0. I read the tech tips carefully and tried it accordingly, but without success. The problem is always that there aren't all routines resolved. The file gets bigger if the command ITResolve is included and then the itools work, that's OK. I tried to store all the routines into one single folder, but without success. Sometimes, but not always small red crosses appear in the project window on some routines? Even more, the sav file doesn't have always the same size. Is there an issue with lower case letters and capitalized letters? I had no problems before version 7.0. Does anybody have a clue?

Thanks for any hint,
Helmut Ahammer
