Subject: IDL make ?

I am relatively new to IDL, having done most of my previous development in a Unix/C type environment. I am adapting to the language ok (David Fanning's course at RSI certainly helped a lot in this respect) but I really miss using make (specifically gmake); it's really a pain keeping track of dependencies for big projects without it. I can think of some kludgy, semi-functional, and nonportable (I'm currently using IDL in both Unix and NT) ways of invoking make from within IDL but was wondering if anyone has written or come across any "make-like" tools for IDL. If not I guess I have something to work on in the proverbial copious spare time,
