Likun,

It can be found in the same place as lonlat2reg.pro and is part of
Peter Alberts map_image package found at:

<http://wew.met.fu-berlin.de/idl/>

However, that link appears to be dead so here is indgen_array.pro.

Bill Gallery

function indgen_array, x_size, y_size, \$
 latitude = latitude, longitude = longitude

```
;IDL> print, indgen_array(3, 4, /lat)
;      0      0      0
;      1      1      1
;      2      2      2
;      3      3      3
;IDL> print, indgen_array(3, 4, /lon)
;      0      1      2
;      0      1      2
;      0      1      2
;      0      1      2
```

```
if keyword_set(longitude) then begin
  xxx = indgen(x_size)
  yyy = intarr(y_size) + 1
endif
```

```
if keyword_set(latitude) then begin
  xxx = intarr(x_size) + 1
  yyy = indgen(y_size)
endif
return, yyy ## xxx
```

```
end
```
