Hi, All:

I am using lonlat2reg.pro to process my data. The code stopped somewhere and needed the program called "indgen\_array". Anyone knows where I can access to it?

Thank you in advance,

    glon = indgen\_array(nlon, nlat, /lon) \* dlon + lon0[0] + dlon /  
2.  
    glat = indgen\_array(nlon, nlat, /lat) \* dlat + lat0[0] + dlat /  
2.

Likun~
