You could also create a ROI object and use the compute_mask function.

```
contour, image, Path_XY = path_xy ....  
roi = Object_New('IDLANROI', path_xy)  
mask = roi->Compute_Mask(dimensions = size(image, /Dim))  
indices = where(mask EQ 255B)
```

There is a run_length keyword to compute_mask that you can use if you don't want to create the entire mask.
