
Subject: mac - right mouse button?

Hi,

I'm evaluating the IDL demo version for Macintosh. A number of scripts written by people here seem to require one to click on the right or middle mouse button, which is kind of hard to do on the one-button mac mouse. I can't find anything in the on-line documentation describing what keys to press to emulate a right mouse click, and experimentation with random pressing of various keys whilst clicking the mouse has not been too helpful. Could somebody enlighten me about what one has to do to input middle and right mouse button clicks with a Mac?

Many thanks!
