Hi All,

David's challenge in another thread re. finding distances between points in an image got me thinking.. Wouldn't it be an idea to set up 'challenges' where people can submit their best solutions to specific problems, with a little reward attached? The best solution to the problem could then be popped in the ITTVis program repository. The problems could come from e.g., frequently encountered problems passed on to ITTvis.

I know that ITTvis staff frequent this forum. Please let me know what you think of this idea..

J.
