Subject: help to a freshman with show3

Posted by Boris on Wed, 27 Mar 1996 08:00:00 GMT

Hi,

I haven't got an access to newsgroup, so please repply to
affaton@onera.fr

1) Using IDL I am trying to use show3 with an image. but my problem is
that input parameter of show3 is only an array. It is not possible
to specifie X and Y values corresponding to this z image.
So I am trying to modify show3 code ,to do it.
changing parameters of surface is easy.
But I didn't success with polywarp.
In fact my x and y values are starting as negative values.
IS anyone know how to do this or where can I find such a program on the
net.

2) How to read a line in an ASCII file, when the line has a size greater
then the buffer of 2048 bytes?

Thank you.
