Hi,

I haven't got an access to newsgroup, so please repply to  
affaton@onera.fr

Using IDL I am trying to use show3 with an image. but my problem is  
that input parameter of show3 is only an array. It is not possible  
to specifie X and Y values corresponding to this z image.

So I am trying to modify show3 code ,to do it.

changing parameters of surface is easy.

But I didn't success with polywarp.

In fact my x and y values are starting as negative values.And I am not  
able to do the good geometrical transform.

IS anyone know how to do this or where can I find such a program on the  
net.
