so I'm importing a java class that contains:

System.exit(0);

HelloWorld.java:

```
public class HelloWorld{
public HelloWorld(){
System.out.println("Hello.");
}
public void quit(){
System.exit(1);
}
}
```

importer.pro:

```
pro importer
asdf = obj_new('IDLJavaObject$HELLOWORLD', $
'HelloWorld')
asdf->quit
obj_destroy, asdf
end
```

This line breaks IDL whereby I have to end the process and restart  
IDL.

Is there any way around this ?

Thanks in advance!
