Hi,

I've been using IDL 7.0 for some time and I just installed it on a solaris system and I would like to use the DOC_LIBRARY function but it can't seem to find it.

```
IDL> doc_library, 'plot.pro'
```

```
% Attempt to call undefined procedure/function: 'DOC_LIBRARY'.
```

```
% Execution halted at: $MAIN$
```

Does anyone know why or where should I look to make sure the correct libraries are installed?

Thanks,
Ryan.
