There was a thread some time ago. Search for it using google groups.

<http://lifeofaprogrammergeek.blogspot.com/2008/05/cuda-development-in-ubuntu.html>

Outlines the CUDA side of things.

Note that with regard to the above link:

EnvyNG broke my XWindows on Ubuntu. I also recall there was a problem with his PATH lines. Possibly the '\'.

I eventually got GPULib working fine [on both 64 and 32 bit machines].

Enjoy.
