System: IDL for Windows

Problem:

1) plot,x,y. Everything looks first class on screen.
2) Go to 'Edit' pulldown menu. Choose 'Print'. Double click on plto window.
3) The output on my HP Colore Lase Jet looks cheap and no where near what was shown on screen. Such as: 'O' have corners, sloped line segments consists of 'steps', thin lines came out as if 'dash' or 'dotted' lines, dark solid lines on screen came out faint and barely visible. Help....

Mark C.
