This may not be the most elegant solution, but you can look at the size of k and add an extra zero to the string manually.

eg for the variable 'tmp' being slotted into the filename,

```
if k lt 10. then tmp = '0' + strtrim(string(k), 2) else k =  
strtrim(string(k), 2)
```

I shall sit here and wait to be shot down by a more elegant solution.
