Research Systems regularly publishes application profile stories that tell how our customers are using IDL. We are looking for users involved in the field of medicine including cancer detection, AIDS research, or clinical applications, who are willing to participate in putting together such a story. A brief interview, follow-up and image are all that is required, and participants have final approval before publication.

Please contact Jon Snyder at 303-786-9900 or via email at jsnyder@rsinc.com to discuss your application and small gratuities in exchange for participation.
