Folks,

A fairly large and intense programming project over the past couple of weeks has resulted in quite a few changes to the Coyote Library. Specifically, there have been a number of changes in the programs I use to work with color. But I also found, and fixed, an embarrassing bug in XStretch, one of my favorite programs.

If you haven't upgraded your Library in awhile, this would probably be a good time to do so, as some of the changes, if downloaded piecemeal, will cause conflicts with other programs in the library.

You can find all the programs in the Coyote Library here:

<http://www.dfanning.com/programs/coyoteprograms.zip>

Cheers,

David
