Subject: In need of array help!
Posted by aaron.pink on Fri, 11 Jul 2008 17:11:50 GMT

Hi folks, I'm new to IDL and I'm having a bit of trouble with array manipulation.

I have a program that encounters data sets of varying sizes, and I need to store the information into an array contained in an object.

I've tried using the array resizing techniques found in http://www.dfanning.com/code_tips/nullarray.html, but no matter what I to, I am unable to actually change the size!

Any suggestions would be very very very helpful!

Thanks,
Aaron
----
struct = {PermResults, $
     SliceNum: 0.0, $
     roiValues: fltarr(100000), $;100000 is far more than I
need, but still a terrible way to do it.
     area: 0.0, $
     perimeter: 0.0, $
     pxlcount: 0L}
