Hi everyone

I have got a problem and I don't know how to solve it:

I have two variables like this:

A, which col*row=2*4

B, which col*row=4*100.

All A's couples (x,y)'s are somewhere in the 2th and 3th column of

Result. I want to take this rows (I want to extract that rows in

result which 2th and 3th columns are settled in the B's).for

example:

A=[[1,2], [3,4], [5,6], [7,8]]

B=[....[11,22,1,2,],..... [44,55,3,4]..... ,[22,99,5,6],[77,66,7,8]...]

.....=means there are some other data

I just want to extract these rows and put them in a new variable

Any help?

Cheers
