Subject: Edge detection for saturn's rings

Hello all,

I've been trying to use some of the built in edge detection routines
implemented in idl such as sobel but I haven't found a very good one
that will work for images such as this:

http://frankosuna.googlepages.com/supportImage.jpg

I am trying to pull out all of the rings in this image and the best I
have gotten is this:

http://frankosuna.googlepages.com/edgeDetect.jpg

Any suggestions and opinions are welcome.

Thanks,

Frank
