Hi~ every one ~

I am trying to read a binary file which is 17920168 bytes and the first 168 bytes of it is header information, The rest of it is 800*800*14 two bytes integer. (like a 3 dimension array.) Can any one help me to read it out ? There should not be so many zeros in it, but i tried several times it still shows a lot of zero.

Thanks~
