Hi there,

to me, the format code '(I03,",",I03,",",I03)' is the same as
'(I03,2(",",I03))'. Not, it seems, to IDL:

```
aa  = indgen(2, 3)
str_aa = string(aa, format='(I03,",",I03,",",I03)')
print, str_aa
str_aa = string(aa, format='(I03,2(",",I03))')
print, str_aa
end
```

gives here on my machine

000,001,002 003,004,005
000,001,002 ,003,004 ,005,

Anybody knows why? Bug or feature?

Cheers
Lasse Clausen
