IDL Workbench updates (like 7.0.3) affect only the Eclipse-based development environment. At present, ITT VIS doesn't have a way for a Workbench update to modify any part of IDL's core -- routines that are "internal" to IDL (like FFT) or routines written in .pro code and contained in IDL's lib directory.

Any time IDL's core changes, the value of !VERSION changes. The version number in the "About IDL Workbench" dialog (Help->About IDL Workbench) reflects only the version of the set of Eclipse plugins that comprise the IDL Workbench.

I hope that helps,
Doug
