p.s. I have monthly averaged data, so 1month = 1 datapoint = 1 date
(e.g. 1/01/2002)

I don't need to plot ALL of the 99 dates, it would be sufficient if
only the year (2000, 2001 etc) would be plotted, but not the day and
month (and the year only ONCE for the following 12 data points). Does
this avoid the problem with the max of 60 elements? and if yes, how on
earth is it done? :)
cheers
juls
