-- Hi there

I'm not sure if this post is quite new... I'm trying to make a color bar using:

```
colorbar = Obj_New("COLORBAR", Range=[0,255],$  
NCOLORS=256, COLOR=0, POSITION=[p1, p2, p3, p4], CHARSIZE=0.5)
```

The position is expressed in normalized range. It works fine, but I would like to know if I can do the same thing without using normalized range. Suppose I want to define the size of the colorbar using pixels units. Is it possible?

Comments welcome,  
Cheers,  
Julio
