I managed to extract the critical code:

```
n=30000l  
p0=ptr_new({i:0l,next:ptr_new()})  
p=p0  
for i=1l,n do begin  
  (*p).next=ptr_new({i:i,next:ptr_new()})  
  p=(*p).next  
endfor  
heap_free,p0 ; FATAL ERROR
```

Is this a known bug?
