Thank you for the various responses.
I am going to look at these and see if they resolve my question or point me in the right direction.
At this point I'm not sure if they will or not.
It may be that I phrased my question incorrectly or that I don't yet understand enough to realise that they do provide an answer.

Just to clarify in case I phrased it wrongly.
I create a graph showing some data in IDL and then save it as a png file which works just fine.

```
image = TVRD(true = 1)  
WRITE_PNG, 'path\filename.png', image
```

I would like to place a small logo (of the lab producing the data) which I have currently also in png form (although if required obviously I can convert it) on this graph in one corner.

It may well be that I have already been given the answer on how to do this once I read through the pointers already given.

thanks again for all help. =o)
